

# **Company Vision**

We provide overwhelmingly appealing service that meets the demands of customers around the world with advanced semiconductor solutions for the next-generation society.

# **Company Mission**

We aim to become the “world’s top semiconductor intellectual property provider” that gives concrete form to the semiconductor intellectual property incorporated in autonomous driving applications and other applications, making an impact on society.

# **Principles for Action**

To nurture a global company culture that can be recognized by customers all over the world and to spread that culture throughout our organization.

To develop superior engineers who are highly motivated to take on new challenges and to form a technology-intensive organization.
